

HANKAY
HYDRAULICS

Introduction

Established in the year 2018 and having an experience of more than 30 years in hydraulics machines as “VJ Hydraulics” we, “Hankay Hydraulics”, are a renowned manufacturer and supplier of a peerless quality array of Floating Cavity & Hydraulic Press Machine. In this offered range, we offer Floating Cavity Hydraulic Press, Double Acting Hydraulic Press and PTFE Lining Hydraulic Press and others.

In addition to this, to scale new heights of perfection, we make sure that the offered range is conformed as per international quality standards. Most importantly we aim at following the patron's needs and requirements that helps us to attain maximum level of contentment. Furthermore, our range is appreciated for features like resistance against corrosion, dimensional accuracy, high tensile strength and optimum performance. Varied configuration sizes and grades are also available with us to meet client's demands in the most efficient manner.

Along with this, we offer Injection Transfer Moulding Machine, PTFE Pipe Cold Extrusion Machine and PTFE Cold Cake Preformer Machine and others. Precision engineered by implying innovative ideas and methodologies, offered range is manufactured at our unit by making use of optimum grade raw material and other components. Procured from the acknowledged vendors, this raw material is fabricated along with advent machinery and technology to come up with an outstanding range of products.

Why Us?

Constantly effort to improve the functional efficiency of the products
Continuous improvement of work processes to achieve maximum customer satisfaction
Capitalize on skilled & experienced manpower
Pool of efficient engineers adept with the latest technologies
Empowered with strong market network
Quick delivery and better reporting system to inform customer regularly to plan their imports
Products are offered at industry leading prices

Infrastructure

We understand the importance of infrastructure as it facilitates in analyzing the production capacity. Manufacturing unit being an integral part of our organization, it fulfills the bulk requirements of the clients. We have advanced machinery and equipment to maintain the swift rate of production. These machines are frequently upgraded to keep in pace with current technological advancements. All our machines are operated by well trained and skilled employees who ensure appropriate manufacturing of our products.

Our Team

Backed by a competent team, we work as a driving force for our organization and lead its path towards success. Efficient team members that we have with us are well versed with this domain and are able to cater to the distinct needs of our clients in a suitable manner. These professionals imbibe vast knowledge of accessing latest technologies and machines in tandem with the client's needs and preferences. Fulfilling their demands in a suitable way, our team mates work to build a friendly atmosphere.

we constantly improve our work and manner, our team constantly works to build a path of success for a company and to fulfil the need of various clients. Our team likes to get involve in new projects and R&D work and have a aggression to build a new projects and to learn something new. We know the need of technology and automtion in new machinaries so we are constantly working on new technologies and automation.

Some of our team members are:

Engineers Quality auditors R & D experts
Warehousing & packaging experts Skilled labors

Products Details

Injection Transfer Moulding Machine

Injection Transfer Moulding machine is used for valve lining process.

This product is available for PFA, FEP, PVDF, PP.
It is available in 1.5 kg to 20 kg (Stroke capacity).

Extruder

Extruder is a pipe extrusion machine for PTFE.
It is available in 1" to 12" Range.

Preformer

Preformer is a billet forming machine for pipe extrusion.
It is available in 1" to 12" range.

Special purpose machines, power pack systems and cylinders.

Special purpose system and cylinder is designed according to customer's requirement.

Press Machines

We make different type of press machineries for different industries.

Ceramic moulding Press.

Ceramic moulding press is used for industrial ceramic pressing.
It is available in Floating Cavity, Single Action, Double Action.
It is also available in auto feeding and manual feeding.
It is available in both fully auto and manual range.

SMC Machines

SMC machine is used for compression moulding process.
It is available in both range manual and fully auto mode.

Styling Machine

Styling Machine is crucible pot making machine.
It is available in auto and manual mode both.
It is available different table diameters.
